Dear Josh

Your note just caught up with me. The fantasy of Dick Wyatt or equivalent and a comm/RV package is very interesting.

We are at present recruiting people in clinical and basic psychopharmacologic-psychobiologic research for both our NYC & Westchester Campuses. There has been an informal Departmental Search Committee, led by Gerry Smith (who is well known to your Behavioral Science Faculty). They have been looking for some months trying to identify candidates. Before you & Z spoke, we had thought that any new space would have to be developed at Westchester. However, the availability of several positions in clinical-investigator roles in our Department might enhance the attractiveness of the position to someone who wants to lead a group.

I do ^{you describe} not know Wyatt personally, but a former resident is working with him and reviews from

several sources have been favorable. I know that he has been ill, but understand that there are no acute problems.

I would suggest that we get together as soon as possible. From CUMC - Genny Smith, Bill Frosch (vice chairman of Psychiatry, Medical Director of Payne Whitney, and involved in psychopharmacology) and myself; from RU - you and ? The three of us will be back in NYC by Labor Day, converging from New England.

Have a pleasant summer, and enjoy your last weeks of Palo Alto.

Sincerely

Phil Muesel
